

Dehaco saves time and money with EazyStock

Dehaco is a market-leading supplier of products to the demolition, recycling and sanitation industries. The company is one of the fastest growing in the Netherlands, with a strong dealer network across Europe. In addition to importing and selling demolition-related products, Dehaco has a large assortment of rental plant.

The challenge: limitations with Dynamics NAV

As a fast-growing distribution company, Dehaco was beginning to experience limitations with the inventory management functionality of their ERP, Microsoft Dynamics NAV.

"Dynamics NAV didn't support our purchasing needs well enough. We needed a more precise way to forecast demand than the static parameters that Dynamics NAV could offer. This is why we started to look for an inventory optimisation solution" said Albert Zuiderduin, purchasing manager at Dehaco.

Stock management is possible in most ERP systems, but when it comes to optimising inventory levels and predicting demand, a standard ERP system is lacking in functionality.

*"We're saving both
time and money
with EazyStock"*

- Albert Zuiderduin, Purchasing
Manager at Dehaco

The solution: full insight and better control

"With EazyStock we now have much more transparency for better insights into our inventory and better stock control. Purchase proposals are generated automatically based on parameters which are always up to date.

We always have up-to-date reports to hand that clearly show the value of our inventory and let us know if we have excess or obsolete items in stock," said Zuiderduin.

By linking EazyStock to Dynamics NAV, Dehaco can see the current demand patterns of every item in their portfolio. These are automatically updated as the products move through their product lifecycles and are adjusted for seasonal influences and promotional campaigns. EazyStock then automatically adjusts reorder points and quantities and required stock levels in the warehouse to meet the expected sales.

The result: time savings and lower inventory levels

Dehaco has now used EazyStock for a year and they've seen really positive results. The integration with Dynamics NAV works very well and the implementation went smoothly.

Zuiderduin continues: "We're saving both money and time with EazyStock. Compared to the old solution, we spend much less time on demand forecasting and inventory management. But even more astonishing is the savings on the inventory itself. We have managed to reduce our surplus stock by 20%.

After a year we can conclude that we've achieved a very concrete result which makes a real difference to our business."

With EazyStock, inventory is reduced and optimised. Capital that was previously tied-up in excess stock can now be used to support company growth.
