

Case study: Jönköping County

Jönköping County

Jönköping County is one of 21 regions in Sweden that is responsible for the country's healthcare, growth and development. The Department of Materials Supply stocks and distributes consumables to all healthcare organisations and providers within the region.

The challenge

A need for more efficient procurement processes and higher service levels

When Jönköping County's legacy inventory management system could no longer be technically supported, the team investigated the marketplace for a more modern solution. They needed a system that could guarantee the high level of service expected by customers, whilst also the ability to streamline replenishment and purchasing processes.

"We always put customers first, so it was important to be able to anticipate demand and act quickly to maintain a high level of service. We chose EazyStock to streamline our processes and provide our planners with the tools they need to make faster and smarter decisions. Previously, a lot of work was done manually and we knew there was great potential to lower warehouse stock levels and increase service levels with the help of EazyStock."

Lennart Johansson
Area Manager

The solution

After scanning the market, EazyStock was found, which has a complete integration with Jeeves, a cloud-based, Swedish ERP system for medium-sized organisations.

Lennart continues,

*"Expectations around EazyStock were high. We saw in front of us a solution that could help us **keep the right items in stock and ensure high levels of fulfilment**, while keeping inventory value to a minimum."*

The integration with Jeeves went smoothly and the results began to roll in quickly.

The results

The Jönköping County region saw positive results after running EazyStock for only three months.

*"We chose to launch one area at a time and do careful follow-ups to ensure that everything is correct and that we get the results we expected. So far, **the results have exceeded our expectations**. We have seen that **our excess stock has decreased and the orders for our suppliers are so much faster and easier to process**.*

We now plan to roll out EazyStock to all areas and expect major savings on reduced inventory and higher customer service levels".

The best thing about EazyStock is that we can trust that the right items are now stocked, which positively affects the stock value and our turnover rate. The ABC rating is superb, as are the forecasts and reports."
